Welcome to Uptown Endodontics,

Dr. Peterson is a member of the American Association of Endodontists. She is dedicated to the highest standard of patient care and treatment excellence. Dr. Peterson and the staff of Uptown Endodontics look forward to making your treatment as efficient and comfortable as possible.

Current techniques in endodontics enable us to perform root canal therapy in one to two appointments. The only exceptions would be if you should experience difficulties during treatment and/or require surgical treatment. Endodontic therapy is performed with a local anesthetic so that you can return to normal activities after your appointment.

There are no special restrictions before treatment. You may eat meals as scheduled before your appointment and take all regular medications on schedule. After treatment, you will be given a list of simple follow-up care instructions. If you experience anxiety with dental treatment, please notify the office **before** your appointment so that we may discuss options for managing your anxiety.

If you have been advised by your physician to take antibiotics for heart or artificial joint replacement, please notify this office before your appointment so that we may address any special circumstances. Also, please bring a list of all your current medications. If you are under the care of a physician for any reason, we will need that physician's name and telephone number before your treatment so that we may ensure the continuity of your care.

If you are pregnant, please contact your physician to obtain any special instructions and a release for treatment before your appointment. Our fax number is 817-276-0229.

A legal guardian or parent must accompany all patients under the age of 18 and must be present during treatment.

We look forward to meeting you at your scheduled appointment time. Should you have any questions, please do not hesitate to call.
